

The CargoWise Education Partnership

✓ Powering the world's supply chains

People and software play a pivotal role in logistics, powering the world's supply chains. As a result, it has become essential that future logistics professionals have exposure to real-world logistics software solutions before entering the industry.

Without access to applied learning opportunities, many students are left without practical experience or knowledge of the tools used by potential employers.

✓ High quality learning outcomes

The CargoWise Education Partnership seeks to solve this problem by providing universities and students access to practical learning in one of the world's leading logistics software platforms, CargoWise, used by 18,000 logistics organizations worldwide.

The partnership makes it easy for universities to offer high-quality applied learning outcomes with minimal time investment. In addition to practical experience, students can also walk away with a free industry-recognized accreditation, helping to increase job readiness and employability within the industry.

Inclusions

FOR UNIVERSITIES

Applied learning materials and education tools

Receive pre-built courseware showing students how to process a range of logistics transactions using a real-world software application.

Access to practical learning environment

Issue practical activities and assessments for students in-class or online, with access to a student training environment (upon application).

FOR STUDENTS

Free industry-recognized accreditation

Set your students apart with a free, industry-recognized accreditation in CargoWise, the industry's leading logistics software. The CargoWise Certification pathway is designed to increase job readiness and enhance employability upon graduation.

Online access to role-based logistics education

Prepare your students for a career in global logistics with free access to WiseTech Academy, the logistics education portal featuring thousands of on-demand, role-based training resources.
